

Stopping Windows Updates (temporarily)

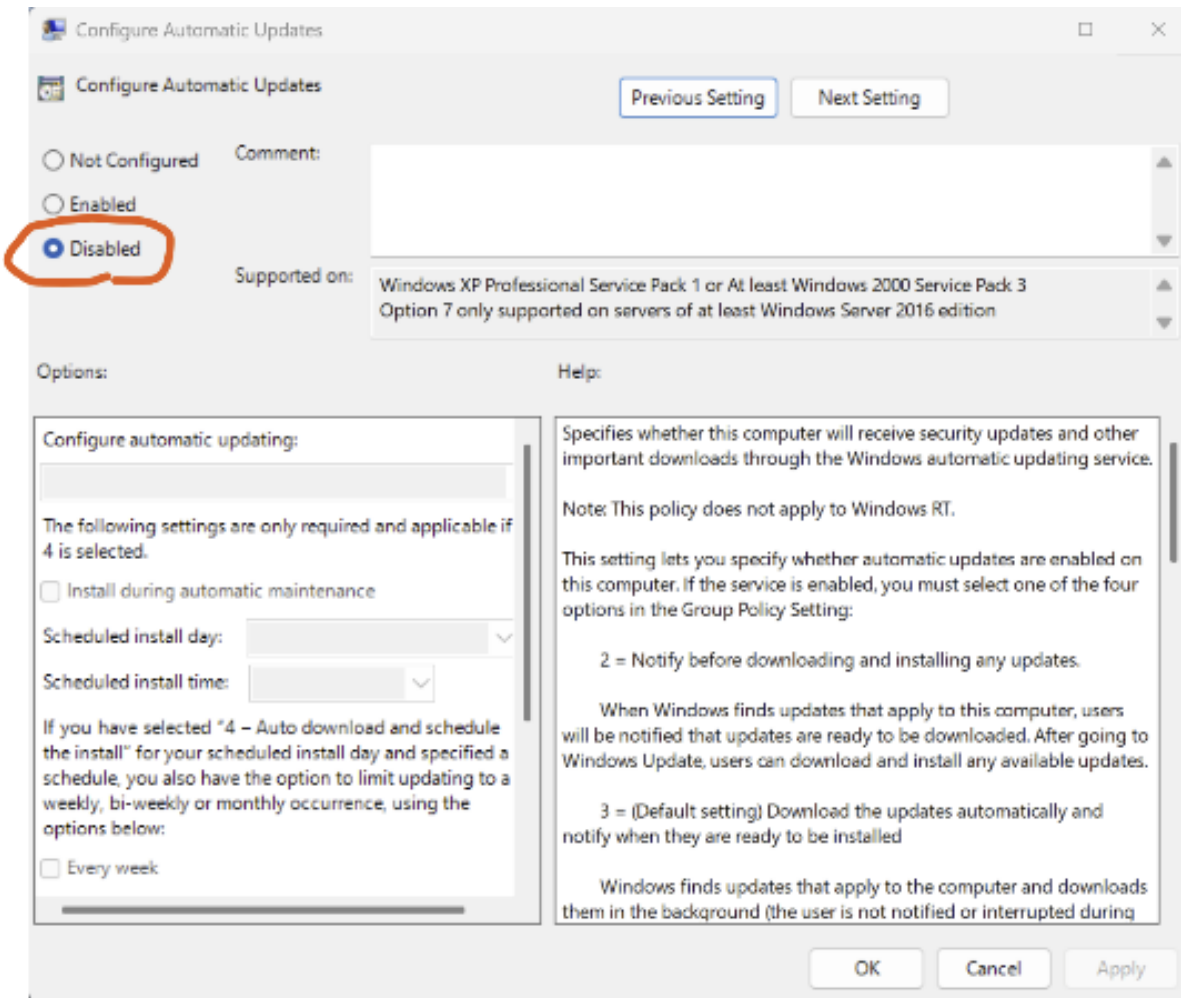

1) At the Windows "Search" (windows task bar) type "gpedit" to open the group policy edit appearing as follows:

2) Expand "Windows Components" and scroll down to "Windows Update" and expand that node:

3) In the right panel, double click on "Configure Automatic Updates" to open a panel where you select and "disable" Automatic Updates, and click "Apply" then "Ok".

Don't forget to reverse this after Captools/net is compatible with the Win 11 24H2 version.
